

Seeing More®

**See how Vision Therapy can improve
your performance.**

A special message from Dr. Marcy Rose...

My own experience with Vision Therapy began before I entered kindergarten. My father, also an optometrist, made it part of his children's lives. Several decades later, I'm doing the same with my own young daughters. Knowing, first hand, how Vision Therapy can enhance learning and success, I want them to have these valuable skills and the confidence they create.

If you are a parent who is concerned—and, yes, frustrated—that your child is “not working up to potential,” I hope you'll seriously consider the role vision may be playing in his or her lack of progress. Vision therapy helps with the processing that leads to learning.

If you are a teacher who has identified students for whom there is a “disconnect” interfering with learning, I encourage you to learn more about Vision Therapy so you can share it with their families. You may wish to visit www.covd.org for a special “Teacher's Guide.”

If you are a coach looking for ways to help your athletes perform at their personal best, I welcome the opportunity to tell you more.

And if you are an individual seeking a higher level of performance—in business, sports or virtually anywhere in life—do consider Vision Therapy.

It works!

Sincerely,

Marcy Rose, OD, FCOVD

Dr. Rose earned her Bachelor of Science degree from Ohio University and her Doctorate in Optometry from The Ohio State University College of Optometry. She is a Fellow of the College of Optometrists in Vision Development,

an accreditation that confirms her expertise in all facets of optometry, including vision therapy. Dr. Rose has practiced optometry in Colorado since 1984, and is a current member/past director of the Colorado Optometric Association.

Seeing clearly is just one facet of good vision. Equally important is the way we make sense of what we see, or how efficiently our **brains interpret** the images our **eyes capture**.

While this eye/brain communication takes only a split-second, it's a complex process that's easily interrupted. *That's where Vision Therapy comes in.*

Vision Therapy is a progressive program of doctor-supervised vision procedures tailored to the individual. These procedures are scientifically designed to:

- Help individuals develop or improve basic visual skills and abilities
- Enhance visual comfort and efficiency
- Change the way one processes or interprets visual information

Depending on the individual's diagnosis, specialized equipment may be required. Commonly used devices include therapeutic lenses, filters, prisms and patches, as well as balance boards and electronic targets.

Vision Therapy appointments generally last 45 minutes and take place in the doctor's clinic. Dr. Rose personally supervises the highly trained vision therapists conducting all sessions. The therapy continues at home, with each patient given exercises individualized to his or her needs.

Vision Therapy produces visible results.

If you watch major league sports, you've seen the results of Vision Therapy. Athletes in virtually every competitive arena are performing at a higher level because of this non-invasive therapeutic program. But it's not just for the pros. Vision Therapy is also a practical, proven strategy for:

- Students who are not progressing as expected due to vision problems.
- Gifted students who are not achieving their potential due to vision problems.
- Individuals diagnosed—and frequently misdiagnosed—with dyslexia and ADD/ADHD.
- Those with crossed eyes, amblyopia (“lazy” eye) or wandering eyes.
- People with vision problems related to autism, or developmental delays.
- Individuals whose vision issues have been caused by head injuries.
- Anyone wanting to improve his/her coordination and enhance success.

Vision Therapy at NorthPark Vision Center

Ours is one of the few practices in Colorado specializing in Vision Therapy. We work with people of every age. Our Vision Therapy patients range from infants with developmental delays, eyes that cross or drift and other vision problems, to older adults wanting to maximize performance and maintain their remaining vision.

Recognizing the complexity of vision issues and the need to address several factors at the same time, we have developed a “total view” approach to Vision Therapy.

The starting point is a diagnostic exam with Dr. Marcy Rose, OD, FCOVD. Highly experienced in Vision

Therapy, Dr. Rose can determine the source of the visual disorder and prescribe a therapeutic program to address the problems. A comprehensive team of experienced Vision Therapists facilitate individual sessions to assure progress.

Our pledge is to provide each person we see personalized, professional attention—just what we’d expect for our own families.

We welcome the opportunity to serve you.
